SUMMARY

UI/UX Designer with a full-stack background, focused on internal tools at enterprise scale. I build and support systems used across the corporation — audit, complaint tracking, clinic, events, payroll, and operations — covering workflow and information architecture, permissions, failure states, and the Laravel/MySQL implementation behind them. Because I build what I design, the interface stays feasible, scalable, and reliable in production.

CORE SKILLS

- **Design & Product:** Workflow & information architecture design, form/table/data-entry UX for internal tools, permissions & RBAC design, error/empty/failure-state design, edge-case & concurrent-use handling, stakeholder discovery & requirements definition, process mapping for operations. Tools: Figma, Google Stitch.
- **Full-Stack:** Laravel, PHP, MySQL, REST APIs, JavaScript, jQuery, AJAX, Blade, HTML5, CSS3, Bootstrap, AdminLTE.
- **Security & Reliability:** MFA (Email OTP + Authenticator), RBAC, Spatie audit logging, password policy & expiry, brute-force auto-lock, OWASP / npm audit.
- **Tools & Workflow:** Git (GitHub, GitLab, Bitbucket), OpenCode, Freshservice.

EXPERIENCE

Web Application Developer — CDO Foodsphere, Inc.

Dec 2024 – Present

Valenzuela City, Philippines

- **For HR and event staff running company-wide event check-in**, mapped the in/out flow across two plant sites, then designed and shipped an event-driven session system with timestamped eligibility and a live participant dashboard — removing manual ticket design and cutting for the enterprise workforce and saving days of work per event.
- **Maintain and support the customer complaint tracking system (CCTR)** — added a dashboard with multi-dimension filters, KPI summaries, analysis charts, and an AI data analysis view that summarizes complaints, surfaces trends, and answers natural-language questions.
- **After a security incident, led hardening across five internal systems (CMS, MES-OEE, ePaySlip, CCTR, BizCard):** remediated 100+ vulnerabilities and designed the login and MFA experience to balance protection against daily user friction — adding MFA (Email OTP + Authenticator), Spatie audit logging, password expiry, and auto-lock after 3 failed attempts — closing critical vulnerabilities and passing security review.
- **For clinic staff and administrators**, mapped intake and records workflows and shipped a clinic management system that reduced manual data entry and improved data accuracy for the enterprise workforce.
- **Led delivery for IT Week (Tech'ka Muna!)**, the company's first company-wide IT event with 500+ attendees, designing three interactive web systems under deadline — an image carousel synced to Smart TVs, an “AI vs Real” detection quiz with anti-cheat, and a 6x6 memory game with a live leaderboard — ranked #1 for engagement, with leadership endorsing annual recurrence.

SELECTED CASE STUDIES

- **UI Redesign — Internal Security & Admin Tools:** Rebuilt three shipped enterprise screens (audit trail, MFA settings, active users) in a modern component system, with before/after rationale and live mockups.
- **Customer Complaint Tracking (CCTR):** Added a dashboard with multi-dimension filters, KPI summaries, analysis charts, and an AI data analysis view; maintain and support the system.
- **Post-Incident Security Hardening:** Balanced security requirements against daily usability across five internal systems — MFA, audit logging, and lockout policy — while remediating 100+ vulnerabilities.
- **Event Management + E-Raffle:** Designed event check-in for the enterprise, replacing manual ticket design and cutting with an automated, session-based workflow. Built a CMS-style theme designer that lets non-technical staff customize the registration and raffle pages on their own.

EDUCATION & CERTIFICATION

B.S. Computer Science — Our Lady of Fatima University | Jan 2020 – Aug 2024

CompTIA ITF+ Certification — Aug 2024
