SUMMARY

Reliable full-stack engineer who builds internal apps and keeps existing systems running for 5,000+ employees at CDO Foodsphere. The team calls me Rich. I'm known for getting the tough, sometimes impossible jobs done on time because I use AI tools wisely. I don't just let AI build — I handle the thinking: system design, architecture, and weighing risks. I treat production decisions as one-way doors, so I always pick the scalable and maintainable path. Day to day I build, fix, design, talk to stakeholders, and handle Freshservice tickets — urgent production issues first, then building.

EXPERIENCE

Web Application Developer — CDO Foodsphere Inc. | Dec 2024 – Present

Building and supporting internal systems for audits, complaint tracking, company events, clinic operations, and operational workflows

- **Build and support internal apps** used by 5,000+ employees — new builds and legacy systems.
- **How I work:** I let AI Agents handle the heavy coding, but I review every line for risk and quality. I talk through different perspectives with AI before deciding. Building is easy with AI — solving urgent production incidents is the priority.
- **How I decide:** I overthink on purpose. I look at all options and pick the one that will be easy to maintain later, because once it reaches production, there's no going back.
- **Daily flow:** Freshservice tickets, stakeholder conversations, system design, then building and fixing. Urgent incidents always come first.

SELECTED PROJECTS

IT Week (Tech'ka Muna!) — Led implementation, 500+ attendees at P2 site

- **Image Carousel Display System** — dual-storage gallery with 3-second AJAX sync to Smart TVs + AI PhotoBooth using Gemini AI
- **Real Or Fake – AI Detection Quiz** — interactive quiz with anti-cheat (shuffled questions) and admin CRUD
- **Icon-ic Memory Matching Game** — 6x6 game with employee voiceovers, ranked #1 for engagement, millisecond timer, JSON session management, real-time leaderboard
- **Result:** Leadership said event should be annual because it made IT visible to the company.

VAPT Mitigation — Led security fixes for legacy systems

- **Found:** outdated Laravel, PHP, AdminLTE, Bootstrap, jQuery, no MFA, no audit logging, no password expiry, no auto-lock after 3 failed logins
- **Fixed:** upgraded frameworks, added MFA (Email OTP + Authenticator), audit logging with Spatie, password expiry, auto-lock after 3 failed attempts
- **Result:** Closed critical vulnerabilities and helped systems pass security review.

Core Systems I'm Most Proud Of

- **Customer Complaint Tracking (CCTR)** — My first legacy system, messy code and architecture. Used AI to understand and improve it without breaking it. Now stable and maintainable.
- **Event Management + E-Raffle** — Automated in/out for company events. E-raffle feature removed the need to manually design and cut tickets for 5,000 employees — saved days of manual work every event.
- **Clinic Management System** — Optimized clinic workflows by reducing manual data entry and improving data accuracy across administrative and clinical teams.

TECHNICAL SKILLS

- **Backend:** PHP, Laravel, Blade, MySQL, REST APIs, RBAC, Audit Logging

- **Frontend:** JavaScript, jQuery, AJAX, DataTables, Bootstrap, AdminLTE, HTML5, CSS3
- **AI Tools (daily):** Claude Code, Codex, OpenCode, OpenRouter API, Gemini AI
- **Developer Tools:** Git (GitHub, GitLab, Bitbucket), Freshservice, Figma, Google Stitch

EDUCATION & CERTIFICATION

- **B.S. Computer Science** — Our Lady of Fatima University | Jan 2020 – Aug 2024
- **CompTIA ITF+ Certification** — Aug 2024
