JONRICH BASCUG

AI Application Engineer — Agentic Systems & Enterprise Software
Valenzuela City, Philippines | jbbascug20@gmail.com | 0908 668 3254 | linkedin.com/in/jonrich-bascug | portfolio-by-jonrets.netlify.app

SUMMARY

AI application engineer who designs enterprise systems and builds them with AI agents. Specification, architecture, and verification are mine; a custom agent harness handles implementation. Led a five-system security hardening program by writing one implementation spec and adapting it per system through a phased agent loop.

CORE SKILLS

Agentic Engineering: Spec-driven development, context engineering, context handoff, subagent orchestration, verification gates, structured output validation, MCP tool boundaries
AI Integration: LLM API integration, prompt design, JSON Schema validation, LLM triage, provider fallback, injection-resistant boundaries
Systems & Security: System design, architecture decision records, non-functional requirements, failure-state design, RBAC, MFA, audit logging, OWASP
Application Development: Laravel, PHP, MySQL, Python, FastAPI, REST APIs, JavaScript, Vue 3, Inertia.js, Blade
Tools: Git, GitLab, OpenCode, Claude Code, Codex, Docker, pytest, Figma

EXPERIENCE

CDO Foodsphere, Inc. Dec 2024 - Present
Web Application Developer / Application Support Specialist — Valenzuela City, Philippines

AI & Agentic Delivery

- Authored a shared implementation spec for MFA, audit logging, password expiry, and account lockout, then adapted and executed it across five internal systems through a phased agent loop with a verification gate per system.
- Built an AI-assisted analysis interface for the complaint tracking system that summarizes records, surfaces trends, and answers natural-language questions in 3-7 seconds for 100+ complaints per month across 20+ departments.
- Worked through written specs, context handoff packs, and read-only QA passes; reviewed every diff and validated each change in staging before release.

Security & Reliability

- Remediated 100+ vulnerabilities across five legacy systems and rolled out MFA, audit logging, password expiry, and 3-attempt auto-lock in ~1 month (2-3 months with post-deployment fixes and documentation).
- Designed MFA for a mixed workforce: TOTP and email OTP, bcrypt-hashed recovery codes, a deskless/shared-terminal mode, and proactive expiry messaging.
- Designed a three-tier audit logging architecture (global observer, trait-based, manual) with device and location enrichment and explicit fallback behavior.

Enterprise Systems

- Shipped an event-driven check-in system across two plant sites for company-wide events (700-5,000+ attendees), cutting per-person check-in from 1-2 minutes to a 2-3 second scan.
- Built a clinic system handling 2,000-5,000 patient records per quarter, and a CMS-style event system that lets non-technical staff customize registration and raffle pages.

SELECTED PROJECTS

AI Security Analysis Agent — Locked output contract, deterministic core, LLM triage 2026

- Built a static-analysis agent returning schema-validated JSON against a locked output contract, with a deterministic detection core and an LLM triage layer; 190+ tests, a CLI/REST parity check, and an MCP tool boundary in a read-only container.

Job Finder Platform for AI Agents — Architecture Package — Design complete, not implemented 2026

- Produced 57 functional requirements, 40+ measurable non-functional requirements, 6 architecture decision records, and a 1,047-line API contract for an agent marketplace through a four-agent pipeline with written handoffs.

Laya-Jev — Typed Decision Agent — Personal exploration 2026

- Explored typed decisions with calibrated confidence gates, verified by a 67-test offline pytest suite and per-decision audit trails.

Also shipped: NotiLog, a Kotlin Android app live on Google Play — encrypted on-device notification history with no account and no analytics, plus optional end-to-end encrypted partner sharing.

EDUCATION & CERTIFICATIONS

B.S. Computer Science — Our Lady of Fatima University Jan 2020 - Aug 2024
CompTIA ITF+ (Aug 2024)
