SUMMARY

Full-stack web developer building and supporting internal systems for 5,000+ employees at CDO Foodsphere. I ship new Laravel applications, rescue legacy systems, and lead security hardening — including a post-incident program that remediated 100+ vulnerabilities across five internal systems. I use AI as a force multiplier while owning the architecture, security, and risk decisions, delivering in days what used to take weeks. The team calls me Rich.

EXPERIENCE

Web Application Developer — CDO Foodsphere Inc. | Dec 2024 – Present

Building, securing, and supporting internal systems for audits, complaint tracking, clinic, company events, payroll, and operations.

- **Build and support internal apps** used by 5,000+ employees across audits, complaint tracking, clinic, company events, payroll, and operations.
- **Security:** Led a post-incident hardening program across five internal systems (CMS, MES-OEE, ePaySlip, CCTR, BizCard) — remediated 100+ vulnerabilities, upgraded outdated Laravel/PHP/AdminLTE/Bootstrap/jQuery, and added MFA (Email OTP + Authenticator), Spatie audit logging, password expiry, and auto-lock after 3 failed logins.
- **Legacy rescue:** Took ownership of a messy legacy complaint-tracking system (CCTR) and used AI-assisted analysis to refactor it safely in production, significantly reducing recurring bugs and incidents.
- **Delivery:** Pair AI agents with hands-on architecture and risk review to ship new builds and refactors in days instead of weeks.
- **Daily flow:** Freshservice tickets, stakeholder conversations, system design, then building and fixing — urgent production incidents first.

SELECTED PROJECTS

Post-Incident Security Hardening (VAPT Mitigation) — 2026

- Covered CMS, MES-OEE, ePaySlip, CCTR, and BizCard.
- Remediated 100+ vulnerabilities from legacy framework and dependency debt.
- Added MFA, audit logging, password expiry, and brute-force auto-lock.
- Result: Closed critical vulnerabilities and passed security review.

Customer Complaint Tracking (CCTR) — 2024

- Inherited a messy legacy system with unclear architecture.
- Used AI-assisted code mapping to refactor without breaking production.
- Result: Stabilized and made maintainable; significantly reduced recurring bugs/incidents.

Event Management + E-Raffle — 2024

- Automated event in/out for company events.
- E-Raffle removed manual ticket design and cutting for 5,000 employees.
- Result: Saved days of manual work every event.

Clinic Management System — 2025

- Optimized clinic workflows across administrative and clinical teams.
- Reduced manual data entry and improved data accuracy.

IT Week (Tech'ka Muna!) — 2025

- Led implementation for 500+ attendees.
- Delivered three original systems: Image Carousel Display, Real Or Fake (AI Detection Quiz), and Icon-ic Memory Matching Game.

- Result: Ranked #1 for engagement; leadership endorsed annual recurrence.

TECHNICAL SKILLS

- **Backend:** PHP, Laravel, Blade, MySQL, REST APIs
- **Frontend:** JavaScript, jQuery, AJAX, DataTables, Bootstrap, AdminLTE, HTML5, CSS3
- **Security:** MFA (Email OTP + Authenticator), Spatie Audit Logging, OWASP / npm audit, RBAC, Password Policy
- **AI Tools (daily):** OpenCode, API format compatible with OpenAI/Anthropic
- **Developer Tools:** Git (GitHub, GitLab, Bitbucket), Freshservice, Figma, Google Stitch

EDUCATION & CERTIFICATION

- **B.S. Computer Science** — Our Lady of Fatima University | Jan 2020 – Aug 2024
- **CompTIA ITF+ Certification** — Aug 2024
