

JONRICH BASCUG

Product-Minded Web Application Developer | UX, Automation & Enterprise Systems

Valenzuela City, Philippines | jbbascug20@gmail.com | portfolio-by-jonrets.netlify.app | linkedin.com/in/jonrich-bascug | 0908 668 3254

SUMMARY

Web Application Developer with a product and UX mindset, experienced in designing, building, securing, and improving internal enterprise systems. Work spans workflow analysis, information architecture, application development, automation, data-driven interfaces, AI-assisted analysis, and application security across HR, operations, clinic, customer complaints, events, payroll, and administrative systems. Comfortable moving from an ambiguous business problem to workflow discovery, system investigation, interface design, implementation, and production support.

CORE SKILLS

Product & Systems:

Workflow analysis, information architecture, process mapping, requirements discovery, internal tools, edge-case handling, failure-state design, permissions & RBAC, operational workflow improvement

Design & UX:

UI/UX design, user flows, forms, tables, data-entry UX, dashboards, administrative interfaces, security-sensitive UX, Figma, Google Stitch

Application Development:

Laravel, PHP, MySQL, REST APIs, JavaScript, jQuery, AJAX, Blade, HTML5, CSS3, Bootstrap, AdminLTE

Automation & Data:

Workflow automation, operational dashboards, data analysis interfaces, AI-assisted data analysis

Security & Reliability:

MFA (Email OTP + Authenticator), RBAC, Spatie audit logging, password policy & expiry, brute-force protection, auto-lock, OWASP, npm audit

Tools & Workflow:

Git, GitHub, GitLab, Bitbucket, OpenCode, Freshservice

EXPERIENCE

Web Application Developer — CDO Foodsphere, Inc.

Valenzuela City, Philippines | Dec 2024 – Present

Enterprise Systems & Workflow Automation

- Designed and shipped an event-driven check-in system for company-wide events across two plant sites, mapping the operational in/out workflow and implementing timestamped eligibility, session handling, and live participant monitoring to replace manual ticket preparation.
- Mapped clinic intake and records workflows and developed a clinic management system that reduced manual data entry and improved data accuracy for staff and administrators.

- Built a CMS-style event and raffle workflow that allows non-technical staff to customize registration and raffle pages without developer involvement.

Product, Data & AI

- Maintained and enhanced the Customer Complaint Tracking System (CCTR), adding multi-dimensional filtering, KPI summaries, analysis charts, and an AI-assisted analysis interface for summarizing complaints, surfacing trends, and answering natural-language questions about the data.
- Translate operational requirements into system workflows, interfaces, data structures, and implementation decisions across multiple internal applications.

Security & Application Reliability

- Led application hardening across five internal systems following a security incident, remediating 100+ vulnerabilities and implementing MFA, audit logging, password expiry, and automatic account lockout after three failed attempts.
- Designed security-sensitive authentication and administration interfaces to balance security requirements with usability for day-to-day enterprise users.
- Worked with application security and reliability concerns including RBAC, audit trails, password policies, brute-force protection, OWASP practices, and npm vulnerability auditing.

Technical Delivery & Product Execution

- Led delivery for IT Week (Tech'ka Muna!), a company-wide technology event with 500+ attendees, designing and shipping three interactive web systems under deadline: a Smart TV-synced image carousel, an anti-cheat 'AI vs Real' detection quiz, and a 6x6 memory game with a live leaderboard.
- Worked independently across discovery, workflow analysis, interface design, implementation, debugging, and production support while coordinating with operational stakeholders.

SELECTED PROJECTS / CASE STUDIES

Customer Complaint Tracking System (CCTR)

Enhanced an enterprise complaint-management system with KPI summaries, multi-dimensional filtering, analysis charts, and an AI-assisted data analysis experience for exploring complaint trends and answering natural-language questions.

Post-Incident Security Hardening

Hardened five internal enterprise applications following a security incident, remediating 100+ vulnerabilities and implementing MFA, audit logging, password controls, and account lockout while considering the usability impact of security requirements.

Event Management & E-Raffle

Designed and implemented an event workflow spanning registration, session-based check-in, eligibility, participant monitoring, and raffle operations, including a CMS-style theme designer for non-technical staff.

Enterprise UX Redesign

Redesigned shipped enterprise interfaces including audit trails, MFA settings, and active-user management, focusing on information hierarchy, usability, permissions, and security-sensitive workflows.

EDUCATION & CERTIFICATION

B.S. Computer Science — Our Lady of Fatima University | Jan 2020 – Aug 2024

CompTIA ITF+ Certification | Aug 2024
