JONRICH BASCUG

Web Application Developer — Enterprise Systems, Security & UX

Valenzuela City, Philippines | jbbascug20@gmail.com | 0908 668 3254 | linkedin.com/in/jonrich-bascug | portfolio-by-jonrets.netlify.app

SUMMARY

Web application developer with a product and UX mindset, focused on internal enterprise systems. Experienced designing, building, securing, and improving applications across HR, clinic, complaints, events, payroll, and admin. Builds with AI agents using written specifications, context handoff, and a verification gate before release.

CORE SKILLS

Application Development: Laravel, PHP, MySQL, SQL Server, REST APIs, JavaScript, jQuery, AJAX, Blade, Vue 3, Inertia.js, Tailwind, Python, FastAPI

Systems & Product: System design, workflow analysis, information architecture, requirements discovery, process mapping, failure-state design, RBAC

Security & Reliability: MFA (TOTP + email OTP), audit logging, password policy and expiry, brute-force protection, OWASP, secrets redaction, CVE audit

Design & UX: UI/UX design, user flows, forms, tables, data-entry UX, dashboards, admin interfaces, security-sensitive UX, Figma

Agentic Engineering: Spec-driven development, context engineering, context handoff, subagent orchestration, verification gates, structured output validation

Tools: Git, GitHub, GitLab, Bitbucket, OpenCode, Claude Code, Codex, Docker, pytest, k6

EXPERIENCE

CDO Foodsphere, Inc. Dec 2024 - Present

Web Application Developer / Application Support Specialist — Valenzuela City, Philippines

Enterprise Systems

- Shipped an event-driven check-in system across two plant sites for company-wide events (700-5,000+ attendees), cutting per-person check-in from 1-2 minutes to a 2-3 second scan.
- Mapped clinic intake and records workflows and built a clinic management system handling 2,000-5,000 patient records per quarter; replaced paper intake and cut HRIS patient lookup from ~10s to ~2s.
- Built an event-day platform: CMS-style registration/raffle pages, registration and token kiosks, and Deal or No Deal (20 briefcase holders + Player of the Night), removing the recurring developer ticket for every template change.
- Led technical delivery for IT Week with 500+ attendees; shipped three interactive web systems in one month, including a 200+ photo AI pipeline and a 6x6 game with 500+ unique players.

Security & Reliability

- Led a post-incident hardening program across five internal systems: authored one implementation spec for MFA, audit logging, password expiry, and account lockout, adapted it per system, remediated 100+ vulnerabilities, and shipped the controls in ~1 month.
- Designed MFA for a mixed workforce — TOTP and email OTP, bcrypt-hashed recovery codes, a deskless/shared-terminal mode, and proactive expiry messaging instead of surprise lockouts.
- Designed a three-tier audit logging architecture (global observer, trait-based, manual) with device and location enrichment, plus the admin interfaces that expose it.

Product, Data & Modernization

- Maintained and enhanced the Customer Complaint Tracking System (CCTR), handling 100+ complaints per month for 20+ departments; added filtering, KPI summaries, charts, and an AI-assisted analysis view answering in 3-7 seconds.
- Led the phased major-version front-end migration across 60+ Blade files (Bootstrap 4 to 5.3, AdminLTE 3 to 4, DataTables 1.10 to 2.3), with a phase-by-phase audit, per-phase verification, and a documented rollback plan.

SELECTED PROJECTS

NotiLog — Private Notification History — Live on Google Play 2026

- Shipped a Kotlin Android app that keeps an encrypted, on-device history of dismissed notifications — no account, no analytics, no backend that stores notifications — plus optional end-to-end encrypted partner sharing (SQLCipher + Android Keystore).

Job Finder Platform for AI Agents — Architecture Package — Design complete, not implemented 2026

- Produced 57 functional requirements, 40+ measurable non-functional requirements, 6 architecture decision records, and a 1,047-line API contract for an agent marketplace.

Reverse Bingo — Live Event Platform — Laravel + Vue, 600-person event 2026

- Built pre-event card lock, an offline PNG/PWA fallback, and revision-stamped WebSocket draws so game night needs only 2-3 browser clients and never depends on the venue network; 287 tests / 1,668 assertions.

EDUCATION & CERTIFICATIONS

B.S. Computer Science — Our Lady of Fatima University Jan 2020 - Aug 2024

CompTIA ITF+ (Aug 2024)
